

This is what I am trying to say. By writing the  
 beginning of my article I wanted to show that the  
 situation of our country is very difficult and  
 that we must take steps to improve it. The  
 first step is to increase the production of  
 foodstuffs, especially grain. This will help us  
 to feed our people better. We must also  
 develop our industry and agriculture.  
 We must also increase our exports and  
 decrease our imports. This will help us to  
 earn more money and to buy what we need.  
 We must also increase our industrial output  
 and decrease our agricultural output. This  
 will help us to earn more money and to buy  
 what we need. We must also increase our  
 industrial output and decrease our agricultural output.  
 This will help us to earn more money and to buy  
 what we need.
